

Capability	
Capability	Healthcare System Recovery
Capability Definition	Healthcare system recovery involves the collaboration with Emergency Management and other community partners, (e.g., public health, business, and education) to develop efficient processes and advocate for the rebuilding of public health, medical, and mental/behavioral health systems to at least a level of functioning comparable to pre-incident levels and improved levels where possible. The focus is an effective and efficient return to normalcy or a new standard of normalcy for the provision of healthcare delivery to the community.

Capability 2 - Healthcare System Recovery	
Function 1	
Function	1. Develop recovery processes for the healthcare delivery system
Function Description	Identify healthcare organization recovery needs and develop priority recovery processes to support a return to normalcy of operations or a new standard of normalcy for the provision of healthcare delivery to the community.

Capability 2 - Healthcare System Recovery Function 2	
Function	2. Assist healthcare organizations to implement Continuity of Operations (COOP)
Function Description	Maintain continuity of the healthcare delivery by coordinating recovery across functional healthcare organizations and encouraging business continuity planning. COOP guides how key resources from governmental, non-governmental, and private sector agencies can be used to support the sustainment and reestablishment of essential services for healthcare organizations. This coordination assists healthcare organizations to maintain their functional capabilities during, and after an all hazards incident and enables a rapid and more effective recovery.
