

About our program

Behind the double doors of the Center for Complete Wound Care and Hyperbaric Therapy, a multidisciplinary treatment team is working hard to manage acute and chronic wounds and reduce or eliminate the threat of amputation.

Our services are integrated into an individual's ongoing health care with the support of an attending physician. Qualified wound care specialists provide weekly progress reports to the referring physician. Individuals then return to the referring physician for their ongoing care.

Our highly trained staff includes physicians and surgeons specializing in wound care and hyperbaric medicine as well as advanced practice nurses, nurses and technicians trained and certified in wound care and hyperbaric therapy.

The Center for Complete Wound Care and Hyperbaric Therapy

These comprehensive services are conveniently located in the North Pavilion of the hospital.

2800 W. 95th St. | Evergreen Park, Illinois
(708) 229-6060

Hours:

Monday – Friday | 7 a.m. – 3:30 p.m.

Wound care

The Center for Complete Wound Care and Hyperbaric Therapy offers a comprehensive, state-of-the-art approach to managing simple to complex wounds. After the initial assessment and evaluation, a treatment plan is designed specifically for an individual's needs. Therapies are consistent with best practices and evidence-based medicine.

Conditions we treat

- Arterial insufficiency wounds
- Diabetic ulcers
- Foot ulcers
- Fungating wounds
- Gangrenous wounds
- Hydradenitis
- Lymphedema
- Minor burns
- Necrotizing wounds
- Pressure ulcers
- Peripheral and vascular wounds
- Pyoderma gangrenosum
- Radiation wounds
- Surgical wounds malignancy
- Traumatic wounds
- Venous insufficiency wounds

Hyperbaric oxygen therapy

Hyperbaric therapy provides advanced wound healing by increasing oxygen delivery to injured tissue. The treatment improves infection control, increases micro blood vessel formation and preserves damaged tissues.

Conditions we treat

- Actinomycosis
- Amputation revision
- Chronic osteomyelitis
- Chronic refractory
- Crush injuries
- Fourniers disease
- Gas gangrene
- Graft complication
- Necrotizing fasciitis
- Non-healing diabetic foot wounds
- Osteomyelitis
- Osteoradionecrosis
- Preparation and preservation of compromised skin graft or flap
- Radiation cystitis
- Radiation tissue injury

Limb salvage

This program combines the specialties of wound care, vascular surgery, nursing care, physical therapy and other disciplines as needed. This may include infectious disease, nutrition, diabetes management, etc., to foster independence and prevent diabetes and peripheral arterial disease (PAD) amputations.

Conditions we treat

- Peripheral arterial diseases of the extremities
- Critical limb ischemia
- Diabetic wounds
